Sydney Library borrowing conditions

The Library will hold textbooks, recommended readings and supplementary readings

Loan rules:
- Items may be borrowed for 4 weeks
- Option of 1 renewal
- 30 items
- Late fees apply

Short loans:
- 2 hours
- Can be taken outside the Library

(NB: All textbooks are in Short Loans)
Sydney Opening Hours

Monday - Thursday
9am - 9pm

Friday
9am - 5:30pm

Saturdays
9am-5pm (enter the building before 3.30pm)

Librarian Consultation times:

Available Monday to Friday
9am-5pm

15 Minute research help consultations
Inter Campus Document Delivery

Students can borrow from the Wollongong Campus Library:

- Books, Book chapters - within 5 days. Check your UOW email for notification
- Conference papers delivered to your UOW email
- Journal articles delivered to your UOW email
- Published reports

Items will be held at the Library for 7 days only.
Key to access

Your student card:
- Your borrowing card
- Should be carried with you whenever you are at the campus

If your book has been borrowed, place a "Hold".
To place a “HOLD” on a book

Enter your family name
Barcode on your student card

Choose Sydney and then click Submit.

You will receive an email when your book is ready for collection. It will be held for you for 7 days.
If all books are borrowed – check and see if another library will lend it to you.
This time choose “BONUS+”

2. “Request This Item” from BONUS+

3. Choose University of Wollongong and click Submit.
What is **BONUS+**?

- Over 6 million items available
- Fast turnaround time - delivery is 2-7 days
- 10 requests for postgraduates
- Loan period 21 days, no recall
- 1 renewal may be possible if another user has not requested the item
- Books should be returned to the UOW Library that they were collected from
- $125 fine for billed or lost books
- Overdue penalties apply at the same rate as a standard overdue loan $1 per day
- **NOTE:** A BONUS+ loan remains on a client’s borrowing record until such time as the borrowed item is returned and checked in at the owning library.
Weekly readings (E-Readings)

Are journal articles and book chapters selected by your lecturer to read before class which are available online through the library catalogue.

WHAT TO DO: When you get your first assignment…

Take time to plan!

1. Develop a search plan - Understand your question
2. Select sources to locate information – catalogue, databases, websites
3. Search and evaluate – ensure you use quality sources
4. Record what you use for your reference list
Step 1: Develop a search plan

Identify the keywords in the assignment question

What factors influence human resource management in a globalised economy?

<table>
<thead>
<tr>
<th>Keywords</th>
<th>Alternative Keywords</th>
</tr>
</thead>
<tbody>
<tr>
<td>Human Resource Management</td>
<td>- Personnel management</td>
</tr>
<tr>
<td></td>
<td>- Staffing</td>
</tr>
<tr>
<td></td>
<td>- Employment management</td>
</tr>
<tr>
<td></td>
<td>- HRM</td>
</tr>
<tr>
<td>Globalised economy</td>
<td>- International economy</td>
</tr>
<tr>
<td></td>
<td>- International finance</td>
</tr>
<tr>
<td></td>
<td>- Worldwide economy</td>
</tr>
<tr>
<td></td>
<td>- Global wealth</td>
</tr>
</tbody>
</table>
Step 2: Select information sources

What sources do you need to support your ideas?

- **Books**
  (Broad information – good starting point)

- **Journals**
  (Recent information, very specific)

- **Websites**
  (Government, Industry, NFP information, Newspapers, Trade magazines)

- **Company, Industry, Country, product reports**
  (Statistics, Annual reports, Financial information, PESTLE, SWOT)
Step 3: Search and evaluate

How can I search effectively?

- Use keywords from your assignment question
- Use AND to join keywords /ideas
- Think of some alternative words
- Join alternative keywords with OR
- e.g. Human Resource Management OR income
Finds items that include **both** of the words

**Human Resource Management**

AND

**Global economy**

Examining the interrelationships between supply chain integration scope and supply chain management efforts.

Authors: Jayaram, Jayanth
Tan, Keah-Choon
Nachiappan, S. P.

Document Type: Article

Subject Terms: Supply chain management, System integration, Business logistics management, Inventory theory, Strategic planning, Empirical research, MATHEMATICAL models, Physical distribution of goods -- Management, Third-party logistics, Inventory control, Logistic regression analysis, Decision making in industrial management

Abstract: In this article, we study the concept of supply chain integration scope by comparing firms that involve immediate supply chain partners in their strategic efforts (narrow supply chain scope) versus firms that involve supply chain partners beyond the immediate level, for example second tier suppliers and end customers (broad supply chain scope). By relying on Coordination Theory and expanding upon Frohlich and Westbrook’s (2001) ‘arcs of integration’ principle, we propose that supply chain integration scope and the type of supply chain management efforts deployed by firms are correlated. We use data from a large sample of US and European firms to explore the association between supply chain integration scope and supply chain management efforts. The results show that supply chain integration scope can be predicted by a firm’s supply chain management efforts. The implications of our results for practising managers are also offered. Our results suggest that supply chain managers should consider the practices identified in this study while deciding on the appropriate level of supply chain integration scope, i.e., which extended supply chain members to include in their strategic planning efforts. **Abstract:** Inventory control plays an important role in **supply chain management**. Properly controlled inventory can satisfy customers’ demands, smooth the production plans, and reduce the operation costs; yet failing to budget the inventory expenses may lead to serious consequences. The bullwhip effect, observed in many **supply chain management** cases, causes excessive inventory due to information distortion, i.e., the order amount is exaggerated while a minor demand variation occurs, and the information amplified dramatically as the **supply chain** moves to the upstream. In this paper, one of the main causes of bullwhip effect, order batching, is considered. A simplified two-echelon **supply chain** system, with one supplier and one retailer that can choose different replenishment policies, is used as a demonstration. Two types of **inventory** replenishment methods are considered: the traditional methods (the event-triggered and the time-triggered ordering policies), and the statistical process control (SPC) based replenishment method. The results show that the latter outperforms the traditional method in the categories of inventory variation, and in the number of backlog when the fill-rate of the prior model is set to be 99%. This research provides a different approach to **inventory** cost-down other than the common methods like: information sharing, order batch cutting, and lead time reduction. By choosing a suitable replenishment policy, the number of backorder and the cost of **inventory** can be reduced.

A study on inventory replenishment policies in a two-echelon supply chain system

H.T. Lee, J.C. Wu

Abstract

Inventory control plays an important role in supply chain management. Properly controlled inventory can satisfy customers’ demands, smooth the production plans, and reduce the operation costs; yet failing to budget the inventory expenses may lead to serious consequences. The bullwhip effect, observed in many supply chain management cases, causes excessive inventory due to information distortion, i.e., the order amount is exaggerated while a minor demand variation occurs, and the information amplified dramatically as the supply chain moves to the upstream. In this paper, one of the main causes of bullwhip effect, order batching, is considered. A simplified two-echelon supply chain system, with one supplier and one retailer that can choose different replenishment policies, is used as a demonstration. Two types of inventory replenishment methods are considered: the traditional methods (the event-triggered and the time-triggered ordering policies), and the statistical process control (SPC) based replenishment method. The results show that the latter outperforms the traditional method in the categories of inventory variation, and in the number of backlog when the fill-rate of the prior model is set to be 99%. This research provides a different approach to inventory cost-down other than the common methods like information sharing, order batch cutting, and lead time reduction. By choosing a suitable replenishment policy, the number of backorder and the cost of inventory can be reduced.

Start with StartSmart – become familiar with the university system

Go to: UOW Library homepage > Help > Teach yourself > Startsmart
StartSmart?
= Online research skills training

By completing StartSmart you’ll …

– **Get the essentials** … Find items recommended by your Lecturer

– **Stand out** … find extra resources to improve to your assignments

– **Use information responsibly** … avoid plagiarism. It’s a serious offence

– **Be aware** … there’s a whole world of information sources available to Uni students
Step 3: Evaluate your sources

Scholarly vs. Popular Information

- **Scholarly**
  - Usually produced for education and research

- **Popular**
  - Produced in a format suitable for the general public
Look at the sources – Ask questions!

- **C**urrency
- **R**elevance
- **A**uthority
- **A**ccuracy
- **P**urpose
Step 4: Reference list

To access: UOW Library homepage > Referencing & citing > Author-Date (Harvard) > select your resource type e.g. book
To access your University email

Check it regularly!
